Kid's Alm children's travel bed

The Fresh Air from Kid's Alm is the world's first completely ventilated children's travel bed. The patented and innovative ventilation system in the head and foot areas and the open base prevent rebreathing of carbon dioxide, which is often responsible for sudden infant death syndrome. Moisture and mould don't stand a chance of forming thanks to the constant circulation of air, which is provided by the high-quality wooden slatted frame that is covered with mesh fabric. The mesh mattress is so soft and comfortable that a second mattress is not required. For little adventurers, the loophole at the foot end can be opened with a zip so they can climb out of bed on their own. The innovative Fresh Air children's travel bed has several sophisticated features, which ensure restful sleep when travelling.
